
In this video we will see the details of a very nice but very useful website called www.keymacro.com that can open your .DOC, .XLS, .PDF files with the keyboard shortcut Ctrl + Shift + S. You can also set the shortcut to any of your favorite files. This website is very useful when you are working with a new file and do not want to open it in your web browser, so you can have the file opened at your desktop using the keyboard shortcut you select at the website. This is a very simple and useful website which also has many other great features and resources for free. So don't forget to visit and bookmark it now. Enjoy. Thanks for watching this video. If you enjoyed it then please share it and make sure to subscribe. Thanks for watching. We have been trying to find a good way to open and save your files quickly and easily. Microsoft has thought of something really good, and now it is time to share it with you. Microsoft has introduced a new option to the Start menu called File Explorer that allows you to open and save files quickly and easily. File Explorer is just like any other file explorer, except for the fact that it can handle .txt, .doc, .pdf, and .zip files among others. You can use this feature to save or open a file quickly. How to open and save files quickly in File Explorer: Open File Explorer Open the File Explorer To open the File Explorer, click the Start button. To open the File Explorer and search for a file or folder, type in the name of the file or folder, then press the Enter key on the keyboard. At the end of this video, I will explain to you what is Google Docs and how to open and save Google Docs in Windows. Let's now look at how to access Google Docs How to access Google Docs: Open Google Docs Open Google Docs To access Google Docs, open the Google web browser. On the Google web browser, search for Google Docs. When you find Google Docs, click on it to open it. How to open and save Google Docs: Open Google Docs Open Google Docs Once you have opened Google Docs, click on File. On the Google Docs interface, click on File and then click on New. 45cee15e9a

KEYMACRO is a simple, standalone macro-replacement editor. Main features Edit text areas and areas beyond the confines of the visible area of your screen (i.e. in another part of your desktop, or even in a separate program or window). Specify any key combination you wish, or assign it a shortcut key (Shift+Alt+Insert, for instance). View results right after editing. Undo last changes. Settings, and options for the app are a breeze to change. Editing values is done by typing into the text area, hitting Enter, or using the default or "home row" shortcuts (Win + Left/Right Arrow, Mac + Left/Right Arrow). Make your own custom key combinations. Sort, edit and delete

macros, just as with text. Find and replace text. Auto-saving. Bundle size is only 8MB. NOTE: This application requires third party redistributable packages: JRE 8 Update 91 or later.

Opal Performance Suite Description: Opal Performance Suite is a powerful collection of tools that help you analyze, improve and track performance of your applications. This suite includes: Opal Inspector, Opal Dump, Opal Inspector Evolution and Opal Designer. Use Opal Inspector to troubleshoot performance issues and to gather performance metrics such as memory usage, CPU consumption, time spent on a particular method, threads, garbage collection and much more. Get real-time performance insights of your applications by visually monitoring how your application performs on various hardware systems and browsers. Opal Dump displays the source code of your application which allows you to find out why it is slow. To support all major programming languages, Opal Dump includes support for Java, C#, C++, Visual Basic, Delphi, Ruby, Python, Objective C and others. Opal Designer is an integrated application development environment for Opal. You can use Designer to create, edit, compile and debug your application. You can also create and deploy graphical user interfaces (GUI) to many popular application frameworks and libraries including J2EE, GTK, Cocoa, Adobe AIR, and Swing. Use our Performance Insights feature to easily monitor and analyze the performance of your applications. See how your code performs on different hardware systems, as well as in different browsers. This feature integrates
