
A command line tool designed to increase productivity and reduce coding time by automating repetitive and repetitive tasks associated with the creation of Windows batch scripts. Included are functions that include Macro Compression, Macro Self-Compression, Macro Self-Extraction, Expand Attributes, Unicode functions, and more. KeyMACRO uses any.txt files as a source for creating the.bat files. KeyMACRO then uses Delphi's streams to make those files.bat. InfoKumpara Description: Infokumpara is a program which helps Windows users to communicate with the internet and other applications. Infokumpara provides the necessary information for using the Internet and other communication tools. Infokumpara can let users manage network connections, automatically display the correct desktop when sending or receiving messages, as well as display web pages for the selected browser. Infokumpara also allows users to write to files, search, use cookies, and create contact lists. IPCHASE Description: IPCHASE is an easy to use software tool for FTP, E-Mail, SMTP, HTTP, and SSH file transfers. File transfers are as easy as drag and drop and IPCHASE provides a clean interface that allows you to drag and drop files and folders from any file browser to IPCHASE. Once the file is transferred, IPCHASE will compile the file into an executable so that you can quickly and easily transfer files to any computer on your network. All of the tools are designed to be easy to use and to make your life as easy as possible. J.U.L.I.M.A.R Description: J.U.L.I.M.A.R. from InterBytes is a new suite for manipulating compressed files. No matter how complex the format, it is easy to decompress or compress files. Even if your files are META files, RAR or ZIP, you can use J.U.L.I.M.A.R. without any problem. J.U.L.I.M.A.R. allows you to work on one file at a time, decompress and compress it, change the values and options to customize each compression. In addition, J.U.L.I.M.A.R. provides an advanced interface allowing you to extract all information from your files with a single click. Kopiaji bajt Description: Kopiaji bajt - this application is a tool to copy 70238732e0

History: * Created 7/24/2003 TinyLMS FAQ: Q: Why? A: This is for academic purposes, we are not a commercial program, but we are glad to distribute it to anyone. Q: How does it work? A: TinyLMS will ask you to select which SCORM version you would like to create your courses with. Next, you will have to select what type of course it should be, what level of course it is, and what time it should run. Finally, the course can be saved as a ZIP file which TinyLMS will automatically unzip and upload to your LMS. Q: How can I see if this works with my LMS? A: TinyLMS is in Beta right now, if you are using a supported LMS (e.g. Moodle, Liferay, Sharepoint) you should not have any problems with it. Q: Why is it called TinyLMS? A: TinyLMS is written in Java. Most languages are able to run on the JVM, but if you want to use the most popular language (Java), you would have a shortcoming. The JVM is not very friendly to other languages and if we were to go the route of distributing an executable in each language we would probably have to take up a good portion of our time. The name TinyLMS came from the idea of a Java program that would be very small. Q: How can I support this? A: Please send all your ideas and bug reports to the mail-list at tinylms@sourceforge.net Q: Where can I get it? A: You can get it by going to Q: How do I get this working with some other LMS? A: TinyLMS does not have any support for setting
